SUMMARY

My name is Muhammad Saad Hasan and I am a Computer Science Graduate (Expected of 2025) and efficient in software development, artificial intelligence, machine learning, data science, and backend systems. My projects that I have developed in the real-world include medical AI including breast cancer and brain tumor detection using Python, Django, deep learning, APIs, and GUIas an interface. I have excellent skills in frontend (HTML, CSS, JavaScript), database (MySQL, PostgreSQL), data analysis, automation scripts, APIs, and MS Office (Excel, Word, PowerPoint) to create reports and presentations. Having great leadership and project management skills in various projects including BloodLink - Smart Blood Donation & Emergency Response System, I am very good at handling the needs and appropriately addressing deadlines and providing quality answers. I like to address the actual world issues with technology and I am flexible to work in IT, banking, healthcare, and fintech sectors.

EDUCATION

Bachelor of Computer Science Oct 2021-Nov 2025
TIMES UNIVERSITY MULTAN

FSc (Pre-Engineering) May 2019-May 2021
AL-FALAH HSS ALIPUR

WORK EXPERIENCE

Intern: SparkoSol July 2025 - Aug 2025
Developer Intern

- I am interning in Python Developer at SparkoSol where I have been experiencing the practical concepts, best practices, and industry standards in programming. This position is aiding me in writing effective maintainable code and knowing about following software development lifecycle, company discipline, task management and work related communication. I am interested in the backend development and in this area, I am demonstrating my abilities to do server-side programming, manage databases and work on developing APIs as well as I am learning how to work professionally as a member of a development team and how to lead one.

Intern: Marketing Booster Feb 2025 - June 2025
Data Science Intern

- I am interning in Data Science at Marketing Booster, where I am working on a breast cancer detection project. This role is allowing me to gain valuable hands-on experience in machine learning model development, data preprocessing, and result analysis, and I feel positive about the direction of my work here.

Intern: Certura (Remote) May 2025 - June 2025
Data Science Intern

- Completed a remote internship at Certura, where I performed data analysis, visualized data, extracted insights, and trained machine learning models. This experience also gave me a clear understanding of how remote jobs and internships operate, helping me develop adaptability and self-management skills.

Trainee - Extreme Commerce Aug 2024 - Nov 2024
Machine Learning

- At Extreme Commerce, I gained hands-on experience in Machine Learning, working on impactful projects like a brain tumor detection system. The role enhanced my problem-solving skills and deepened my understanding of AI and real-world applications.

ENTREPRENEURSHIP EXPERIENCE

Founder & Lead Developer – A2S Innovations May 2025 - Present

- Founded and managed a small-scale software agency providing remote web, AI, and automation solutions to clients.
- Led end-to-end project development from requirements gathering to deployment and maintenance.
- Delivered projects using Python, Django, HTML, CSS, JavaScript, and APIs, ensuring high-quality and timely delivery.
- Coordinated with team members, managed deadlines, and maintained client communication to ensure satisfaction.
- Gained hands-on experience in business operations, project management, and client relationship building.

PROJECTS

Breast Cancer Detection

- Developed a DenseNet-based deep learning model to classify mammogram images with 95% accuracy, integrating segmentation and tumor localization for clinical reports. Designed an intuitive real-time breast cancer detection GUI for non-technical users. Project with code and documentation is available on GitHub.

Brain Tumor Detection

- Developed a Sequential CNN model for MRI brain scan classification, achieving 97% accuracy in detecting the presence of tumors. Designed and integrated an interactive GUI that allows users to upload MRI images and instantly view prediction results with clear visualization. The project is available on GitHub, making it easy to review, test, and deploy.

Blood Donation System (Ongoing)

- Developing an AI-powered blood donation and emergency response platform with location-based services to connect patients with nearby donors and centers. Implemented real-time map search by city, colony, and blood group with direct contact options. Upcoming features include an AI urgency scoring system, automated chatbot, and smart emergency prioritization.

Library Management System (LMS)

- Developed a lightweight, web-based Library Management System using Flask and Bootstrap, enabling efficient book management, quick search by title or author, and easy tracking of shelf locations. Designed with a user-friendly interface suitable for small libraries or personal collections, with potential for database integration to extend functionality.

SKILLS

- Frontend: HTML, CSS, JavaScript (Responsive UI Design)
- Backend: Python (Django, Flask)
- Databases: MySQL, PostgreSQL
- Machine Learning & Deep Learning: Model Development, Data Preprocessing, Evaluation
- Data Visualization: Matplotlib, Seaborn
- Programming Libraries: Pandas, NumPy
- IT Tools & Office: MS Office Suite (Excel, Word, PowerPoint)
- Professional Skills: Team Leadership, Project Management, Effective Communication, Client Coordination
